

2. What's New

Part of the **Agile Project Management** manual — see also [1. Introduction](#), [3. Scope](#), [4.1 General setup](#), [4.2 Labels](#), [4.3 Project task templates and checklists](#), [4.4 Notifications](#), [5.1 The board](#), [5.2 Working with cards](#), [5.3 Project task cards](#), [5.4 Ticket cards](#), [5.5 Labels](#), [6. Troubleshooting](#).

Unreleased — 2.2.0, not yet published

New

- Time on each task: cards and the card window compare planned hours with the hours spent on the task and its tickets, in green while there is time left and red once over. See [5.3.4.1 Read the hours on a card](#).
- Real start and end dates, filled in by the board as a task moves, and correctable with the new **Edit real dates** right. See [5.3.4.3 How the board fills in the real dates](#).
- A **Late** toolbar toggle that keeps only the tasks over their planned hours. See [5.3.4.4 Show only late tasks](#).
- A **Tickets** section in the task's card window to see, link and unlink the task's tickets, with the new **Link tickets to a task** right. See [5.3.6 Tickets linked to a task](#).
- The Closed column keeps its most recently closed cards visible, set by the new **Closed cards shown** option; older ones are only counted, so large boards load faster. See [5.1.4.3 The Closed column](#) and [4.1.2 Configuration](#).
- Click an avatar on a card to show only that person's or group's cards; a card shows at most three people or groups, with a "+N" for the rest. See [5.1.7.7 Show only one person's or group's cards](#).

- The followups in the card window can be hidden or shown, with a count on the button. See [5.2.3.1 Add a followup, or hide the followups](#).
- Long card titles fit on one line (hover to read them in full), and the **Assign labels** window shows labels as coloured chips, like the label filter.
- A ++ button next to each column's + adds a card from a project task template, checklist included. See [5.3.1.2 Add a card from a template](#).
- A task's progress can be calculated automatically from its solved tickets and ticked checklist items, switched on in the configuration and overridden per project. See [4.1.2 Configuration](#) and [5.1.1.2 Change the type of one project](#).
- **Compact cards**: two-line cards with labels as thin strips, to see more of a busy board. See [5.1.8 Compact cards](#).
- An **Unassigned** toolbar filter keeps only the cards nobody is assigned to. See [5.1.7.3 Show only unassigned cards](#).
- A task's date turns green, amber, red or black as its planned end approaches or passes, and the tickets counter takes the worst Time to resolve colour of its tickets. See [5.3.3.4 Dates and their colour](#).
- The project title at the top of the project page shows the project's state, planned end, percent done, durations and variance. See [5.1.2.2 Read the project title](#).
- A **Historical** button in the card window opens the task or ticket's history, where every board action is now recorded. See [5.2.2.2 Buttons and counters in the window](#).
- A new **Edit planned dates** right controls who can change a task's planned dates. See [4.1.4 Permissions](#).
- The task window's **Link tickets** button opens the same window as the toolbar's, limited to that task's tickets. See [5.3.6.2 Link or unlink a ticket](#).
- Ticket cards show their **Time to resolve** alarm next to the priority, coloured by how close it is. See [5.4.1.3 Time to resolve alarm](#).
- Compact cards now show a task's linked-tickets counter and a time icon listing its durations, and a ticket's type icon and priority strip. See [5.1.8 Compact cards](#).
- A task's hours spent turn into a red badge once over its planned duration. See [5.3.4.1 Read the hours on a card](#).
- Project and task state lists, including the project filter's, show only their own states, without the sort prefix.
- The column for tasks without a state is now called **No status**; it has no add buttons and disappears once empty. See [5.1.4.1 Read a column header](#).

Fixed

- Unlinking a ticket from a card removes it from its task only, keeping it on the project, instead of failing; it needs the **Link tickets to a task** right, like the task's Tickets section.
- Updating the plugin grants its new rights to the profiles that can update projects, instead of leaving new features read-only.
- Fields you cannot edit in the card window are greyed out and locked.
- Collapsed columns stay collapsed after the board reloads, and show their card count under the column name.
- Card dates are shorter, so the card footer no longer overflows.
- On a project's own board, the project code shows once in the title instead of on every card.
- The project board loads for users working in a sub-entity with child entities included.
- Deleted tasks shown with **Show deleted tasks** no longer count in column totals or match filters, and can only be restored or purged.
- Cards you can't move can no longer be dragged, and a card dropped on the **No status** column is refused with a clear message.
- Pinning the card window no longer squeezes the board.
- Closing the toolbar's **Link tickets** window updates the board without reloading the page.

2.1.0 — 2026-09-22

New

- Coloured labels on cards, managed under **Setup → Dropdowns → Kanban labels**, with a label filter on the global board. See [5.5.1 Labels on task and ticket cards](#).
- Checklists on task cards, with a progress ring on the card, which task templates can pre-fill. See [5.3.5 Checklists on task cards](#) and [4.3.1 Setting up project task templates and checklists](#).
- A project's type can be changed after creation, from its own tab or for several projects at once from the Projects list; switching back to Standard keeps the board, its order, checklists and labels. See [5.1.1 Choosing and changing a project type](#).
- A redesigned **Link tickets** window with search, a category filter and a project-eligible switch, whose defaults are set in the configuration. See [5.1.7.11 Link tickets to a project](#).
- The board can be grouped into *Project tasks* and *Tickets* rows. See [5.1.7.6 Group by item type](#).
- A single **Filter projects** window on the global board, searchable and narrowed by type, state and finished projects. See [5.1.7.9 Filter by project](#).
- Deleted tasks can be shown, restored or permanently deleted from the board. See [5.3.7 Deleted task cards](#).

- Column titles and the state filter show state names without their sort prefix, set in the configuration. See [4.1.2 Configuration](#).

Fixed

- Kanban notifications reach the task team and the project managers.
- Applying the project or label filter no longer reloads the page.
- Light label colours stay readable, with dark or light text chosen automatically.
- The board no longer shows tickets a user has no right to read, and card actions respect the user's entities and rights.
- Many smaller display and permission fixes on the board and in the card window.

2.0.0 — 2026-08-11

New

- GLPI 11 compatibility.

Fixed

- Nothing reported for this release.

“ Generated for **Agile Project Management 2.2.0-beta.2** on GLPI 11.0 — 2026-09-27.

Revision #6
