2. What's New

*Part of the **More Security** manual — see also 1. Introduction, 3. Scope, 4. Setup, 5. Usage, 6. Troubleshooting.*

Unreleased

2.0.0 - 24/08/2026

New

- Geoblocking support: block or allow logins based on the country the client IP resolves to — disabled by default, with separate allow-list and block-list modes
- Redesigned configuration page with stacked cards — IP blocking, Whitelisting, and Geoblocking are now visually grouped and easier to navigate
- IP whitelist configuration via web UI — enter comma-separated CIDR ranges directly in the config form instead of database-only setup
- Security log now shows individual attempts by default — expanded detail view with separate columns for Login, Email, and User to identify attack patterns more clearly
- Dashboard cards now track attack trends accurately — top attacking IPs and most-targeted accounts use the per-attempt log for real-time counts across 24h, 7-day, and 30-day ranges

Fixed

- Security log page no longer crashes when opening the "Type" search filter
- Security log tabs no longer reset to the default when sorting, filtering, or paginating

- Dashboard layout and colors tuned to match the reference design
