

Interaction with other plugins

- **ActualTime** — records the working time at each stop. When the technician stops the travel timer on arrival, Waypoint starts an ActualTime task on that ticket automatically. The resulting time is linked to both the ticket and the route.
- **gappextended** — provides the mobile API and the geolocation storage that Waypoint relies on, including the permission that controls access to the Geolocation section. Waypoint cannot run without it.

Revision #2
